ACTIVETRADER / OFFICIAL 2026

Expert Advisor Installation Guide for MT5 & VPS

A complete guide to setting up ActiveTrader Expert Advisors on a Windows VPS: install MetaTrader 5, copy your compiled **.ex5**, load a matching **.set** preset, activate your licence and confirm that the system is connected.

WHAT IS INCLUDED

01 Select your EA and understand balance requirements

02 Configure a secure Windows VPS and MetaTrader 5

03 Install EX5, load presets and activate the licence

04 Monitor operation and troubleshoot common issues

EA downloads: Official package links will be published when available at www.activetrader.co.id/trial/.

Edition: 19 November 2026 | MetaTrader 5 | English

01 | THE TWO OFFICIAL PRODUCTS

Choose your ActiveTrader Expert Advisor

This guide covers only Active Global Market Pro+AI and Active Gold Hunter Pro+AI. Minimum balances are operating restrictions, not guarantees of safety or returns.

PRODUCT	MINIMUM BALANCE	SUPPORTED USE
Active Global Market Pro+AI Included in the 2026 Trial	**USD 5,000 equivalent** for a Forex-only tier. More instruments unlock with higher balances.	Forex, Gold, BTC and Oil, subject to the active EA release and its balance tier.
Active Gold Hunter Pro+AI Included in the 2026 Trial	**USD 10,000 equivalent** is the permanent threshold for opening new positions.	Current v2.061 R1 specialist edition: **XAUUSD**, M15, One-Way.

Global Market — automatic balance tiers

BALANCE (USD EQUIVALENT)	INSTRUMENT ACCESS / TRADE MODE
Below **$5,000**	New trade entries blocked.
$5,000 to less than **$25,000**	Up to **2 Forex symbols**. No Gold, BTC or Oil.
$25,000 through **$50,000**	Up to **2 Gold + 3 Forex** symbols.
Above **$50,000** through **$100,000**	Up to **3 Gold + all authorized Forex** symbols; up to one authorized BTC symbol.
Above **$100,000**	All approved assets, including Oil. Smart Two-Way is available only when enabled and supported by a hedging MT5 account.

Currency conversion: The EA uses broker quotes to calculate the USD equivalent of balances held in USD, EUR, GBP, AUD, CHF or SGD. Monetary TP and daily targets may still be denominated in the account's native currency.

IMPORTANT FOR BTC TRADING

BTC / BTCUSD belongs to the **Crypto** category, not Forex. The updated Global Market v2.061 R3 source corrects its tier classification. Distribute compiled EX5 files only after compilation and demo validation of the new release.

02 | BEFORE YOU BEGIN

What you need for installation

Gather the following items before signing in to the Windows VPS.

01 Your MetaTrader 5 account

Use a valid REAL or DEMO MT5 account number, the precise broker server name and your trading password for signing in locally to MT5. Never submit a password on the Trial form.

02 A Windows VPS

Have the Windows VPS IP/hostname, Remote Desktop credentials and a stable internet connection ready.

03 The official EA archive

Download the product's ZIP/RAR package when published. It should contain a compiled **.ex5** file and the matching pair/broker **.set** presets.

04 Your activation code

Obtain a licence code issued specifically for your selected product and MT5 account. Keep this code private.

Request a self-service 2026 Trial licence

Step 1. Open https://www.activetrader.co.id/trial/ and select Global Market or Gold Hunter.

Step 2. Enter your details, email address and MT5 account number, select REAL or DEMO, accept the policies and complete email verification.

Step 3. Receive your private **ActivationCode** on the confirmation page and at your verified email address.

Step 4. Activate the EA on the authorised MT5 account. The **30-calendar-day period begins at the first authenticated server activation**. Trial entitlement is subject to the portal's one-REAL-plus-one-DEMO rules for the selected product.

2026 TRIAL REGISTRATION DEADLINE

New applications and first activations close on **31 December 2026 at 23:59 WIB (UTC+7)**. Trials activated before this deadline will retain the remainder of their full 30-calendar-day term, including days falling in 2027.

03 | WINDOWS VPS

Set up the VPS step by step

A properly maintained VPS helps keep MT5 running when your home computer is turned off.

01 Choose a Windows VPS

Select a provider that supports Windows and Remote Desktop. As a practical starting point, 2 vCPU and 4 GB RAM may be sufficient for one MT5 terminal; heavier deployments can require more resources.

02 Record VPS login details

Keep the VPS IP address, optional custom RDP port, Windows username and password in a secure password manager.

03 Open Remote Desktop

On a Windows computer, press **Win+R**, enter **mstsc**, then provide the VPS IP and login credentials. Mac users may use a compatible Remote Desktop client.

04 Secure the VPS

Change temporary passwords, apply security updates and keep the firewall enabled. Never share administrator credentials with unverified persons.

05 Check time and location

ActiveTrader time-related guards follow **WIB / UTC+7**. The VPS itself can use another time zone, provided Windows clock synchronization is correct.

06 Confirm connection quality

Choose a VPS location with reasonable latency to your broker's trading server. Monitor CPU, RAM, internet stability and disk space.

WHEN YOU FINISH WORKING ON THE VPS

Disconnect your RDP session without intentionally shutting down Windows. Do not accidentally select **Shut down**, **Restart** or **Log off**. Following scheduled Windows maintenance, check that MT5 has restarted and the EA licence is connected.

04 | METATRADER 5

Install MT5, EX5 and preset files

Complete these steps on the Windows VPS itself, not just on your local computer.

01 Install your broker's MT5

Download MetaTrader 5 from the broker's official website. Install and launch the terminal inside the VPS.

02 Log in to your trading account

Choose **File > Login to Trade Account**. Enter the MT5 account number, trading password and exact broker server. Confirm a live terminal connection.

03 Extract the EA archive

Extract the official ZIP/RAR. Identify the correct **.ex5** Expert Advisor and its accompanying **.set** preset files. Retain a private backup.

04 Open the correct data folder

Select **File > Open Data Folder** from within MT5. This is not the same directory as the terminal application under Program Files.

05 Copy the compiled Expert Advisor

Open **MQL5 > Experts** and copy the **.ex5** file into this directory. Clients do not need private **.mq5** source code.

06 Place the preset files

Copy each matching **.set** into **MQL5 > Presets**. Create the Presets folder if it is not present, or load a SET file from its saved location later.

IF THE EXPERT ADVISOR DOES NOT APPEAR

Press **Ctrl+N** to open Navigator, right-click **Expert Advisors > Refresh**, or restart MetaTrader 5. Check that the EX5 was copied into the data directory belonging to the **correct MT5 terminal**, especially if several terminals are installed.

05 | ACTIVATION

Allow WebRequest and activate the EA

The correct sequence is: allow the server URL, attach the EA, load the preset, then enter your private ActivationCode.

STEP A / ALLOW SECURE WEBREQUEST

In MetaTrader 5, go to **Tools > Options > Expert Advisors** (shortcut **Ctrl+O**). Enable **Allow WebRequest for listed URL**, then add the following exact website address:

https://activetrader.co.id

Click **OK**. This permission allows the EA to verify the account-bound licence with the official ActiveTrader server. The URL must use **https**.

01 Open an authorised M15 chart

Open an allowed symbol in Market Watch and switch the chart timeframe to **M15**. A broker may use an approved suffix such as XAUUSD.m.

02 Attach the Expert Advisor

Drag the appropriate EA from **Navigator > Expert Advisors** onto the M15 chart. Check its Common trading permissions.

03 Load the preset FIRST

In the EA **Inputs** tab, click **Load** and select the .set file for your product, symbol and broker. Review volume limits, risk and protection settings.

04 Paste the ActivationCode

After loading the preset, enter your licence in the **ActivationCode** input field. Loading another preset later may overwrite this field.

05 Enable automated trading

Click **OK**. Turn on the terminal-wide **Algo Trading** toolbar button and confirm the EA-specific permissions are enabled.

06 Wait for licence verification

Watch the EA panel and the **Experts** tab. Allow the terminal to complete online verification; do not interpret a visible panel as proof that new trades are authorised.

Keep activation codes private. Never publish them in screenshots, public tickets or downloadable preset files.

06 | VERIFICATION

Confirm the EA is actually running

A visible panel alone does not guarantee a BUY/SELL entry. All permissions, the signal logic and risk controls must pass.

01 Licence and account details

Confirm the product, MT5 account number, trial expiry and ActiveTrader server status on the chart panel. The account must match your licence.

02 Symbol and M15 timeframe

Confirm that the chart symbol belongs to the selected EA, the timeframe is M15 and live pricing is available. Broker symbols may be BTC or BTCUSD, depending on the release.

03 Experts and Journal messages

Open **Experts** and **Journal** at the bottom of MetaTrader 5. Messages such as BLOCKED or PAUSED usually identify the active protection rule.

04 Live trading permissions

Make sure Algo Trading is on, the broker account is not investor/read-only, the instrument is open for trading and free margin is sufficient.

For Global Market installed across multiple charts

1. Open a separate M15 chart for each supported symbol you want the EA to manage. Use the same approved product/release.

2. Tier pair limits count **distinct active instruments**, not the number of recovery/grid orders. The slot rules coordinate within a single MT5 terminal; separate terminals and VPS instances are not automatically synchronized.

3. Load the correct preset per symbol. Avoid attaching conflicting Expert Advisors to the same symbol or account without checking Magic Number protection.

4. Global Market's **Smart Two-Way** requires strictly more than USD 100,000 equivalent, the relevant input enabled and a broker hedging account. The current Gold Hunter specialist edition remains **One-Way**.

Normal behavior: The EA may temporarily avoid opening positions because of spreads, news, rollover, daily targets, margin, time guards or market direction. Do not disable safeguards simply to force a trade.

07 | SUPPORT

Troubleshooting checklist

Use these checks if an EA cannot be activated or does not open new positions.

ISSUE / PANEL MESSAGE	WHAT TO CHECK
WebRequest not allowed / offline	Tools > Options > Expert Advisors: allow WebRequest and add **https://activetrader.co.id**. Check VPS internet, DNS and firewall.
SERVER VALIDATION PENDING	Verify the account number, product, code, allowed URL and connection. New orders remain subject to successful server validation.
TF must be M15	Switch the EA chart to the required **M15** timeframe.
Symbol not allowed	Use an approved symbol from the current product release. Check broker-specific naming and suffixes (for example BTC versus BTCUSD).
Balance Lock / restricted tier	Verify account **balance**, not equity; account currency; USD-equivalent conversion; tier threshold; and available instrument slots.
TIER PAIR LIMIT	The number of active distinct symbols has reached the allowed limit. Do not attempt to bypass the tier controls.
Foreign Magic / Migration Hold	Look for orders previously opened by another EA or Magic Number. Never close live positions blindly to clear an error.
TRADING PAUSED (REMOTE REVOKE)	Administrative licence revoke blocks new entries. Existing position exits can continue in EXIT ONLY mode. Contact support.
Trial expired / invalid code	Check the product, registered account, trial end date and code. Changing email or VPS does not restart a Trial.
Panel visible but no trade	Check Algo Trading, non-read-only MT5 login, market session, spread, high-impact news, daily targets, cooldown and margin.

CONTACTING TECHNICAL SUPPORT

Provide the EA product/version, broker server, symbol, timeframe, panel status, and relevant **Experts/Journal** messages. Remove passwords, activation codes and unnecessary private account details from screenshots. Official email: **support@activetrader.co.id**.

08 | ONGOING OPERATION

VPS maintenance, security and risk

Complete the following checks after installation and periodically during your Trial.

01 After a VPS reboot

Log in through Remote Desktop, confirm MT5 has started, check the licence status and ensure Algo Trading is enabled. Repeat after scheduled Windows updates.

02 Keep the VPS online

Use reliable hosting with adequate RAM/CPU. Disconnecting Remote Desktop is not the same as shutting down the server.

03 Back up your installation

Keep the original package, presets and purchase documents privately. Use a password manager for licence codes and Windows credentials.

04 Monitor exposure regularly

Review spread, margin, open BUY/SELL positions, floating drawdown, per-symbol limits and Experts messages. Be aware of balance tier downgrades.

05 Install official updates carefully

Download only approved releases. Preserve a preset backup, read the change log and demo-test an updated EA before using it on a REAL account.

06 Understand EXIT ONLY

When the Trial ends or a licence is revoked, the EA can stop creating new entries while continuing to manage existing exits. Review the panel for the exact status.

TRADING RISK NOTICE

Automated trading does not guarantee profits, the absence of floating losses or protection of all trading capital. Forex, precious metals, CFDs, oil and crypto are risky. A minimum balance is only a software operating condition, not a safe investment amount. Exposure depends on leverage, lot size, volatility, costs, execution and broker infrastructure. Test on DEMO and trade only with risk you can afford to bear.

Official support hours: Monday–Friday, 09:00–17:00 WIB; weekends by arrangement. **Website:** activetrader.co.id

09 | READY TO TRADE?

Final installation verification

Review this checklist whenever you move MT5 to a new VPS or install a new release.

01 The Windows VPS is connected to the internet and MT5 remains running.

02 MT5 is logged in to the correct REAL or DEMO trading account.

03 The EX5 is installed in the correct terminal's MQL5/Experts folder.

04 The supported chart is open at M15 with live broker prices.

05 https://activetrader.co.id is whitelisted for WebRequest.

06 The correct SET preset was loaded before entering ActivationCode.

07 Algo Trading permissions are enabled, with adequate margin.

08 The server has validated the product licence on this MT5 account.

09 No tier, symbol, timeframe, target or risk guard is blocking new entries.

DOWNLOADS AND OFFICIAL CLIENT HELP

The official EA download link is not yet published. Once available, use the ActiveTrader Trial portal for the correct product package and installation resources.
